SDC SERIES
AUTOMATIC SLITTING DIE CUTTING MACHINE

YOUR MARKET ... OUR SOLUTIONS

Starview's **SDC Series** combination slitting and die cutting machines are a cost effective way to trim skin packaged products. These machines eliminate the use of individual steel rule dies for each different package configuration. The SDC Series features an intermittent motion in-feed conveyor to transfer skin boards to the die cutting and slitting area. Circular cutters running against a hardened steel roller are used to slit parallel to the movement of the skin board. A pneumatic press activates the cross cutting perpendicular to the movement of the skin board. The interval at which this cut is made is programmable from the touch screen operator interface panel.

Starview's **SDC Series** machines utilize photocells and clear polycarbonate guards for operator safety. To prevent damage to the cross cutting knife, the **SDC Series** machines also utilize photocells to detect products that may be in the cutting area.

For standard die cutting operations using conventional steel rule dies Starview's **RP Series** Roller Die Cutters should be considered.

the STARVIEW ADVANTAGE

- Two sizes available to handle 18" through 30" wide skin boards.
- A single machine able to cut, slit or perforate with products facing up on skin boards.
- Cross-cut is programmable and slitting wheels are moveable for altering cutting pattern without having to make new cutting dies.
- Linear skin board travel facilitates production work flow.
- Small footprint to conserve floor space.
- Industry leading design, construction, features and customer support.
